Subject: United Heckathorn Site - Levine Questions

Hi Jim,

Hope this email finds you well. A few questions have come up about Levine activities at the United Heckathorn site, and I wanted to get your input/confirmation.

- Has Levine conducted any dredging activities in the Lauritzen Channel after 2013. If you have, can you please provide approximate quantities and location of removal? I don't think you have, but just wanted to confirm. Levin has done no dredging in the Lauritzen after the original cleanup was done in the nineties.

- In the most recent Annual Report, it is stated In 2015, piping was installed from interceptor SW-3 to the 20,000 gallon tank located near interceptor SW-5, and the 20,000 gallon tank near interceptor SW-3 was relocated to the SW-5 area. A storm water treatment system will be installed at the SW-5 discharge location in 2015 to prevent or reduce the discharge of pollutants in storm water from industrial activities. The system will treat storm water pumped from interceptors SW-3, SW-4, SW-5, SW-6, and SW-7 using flocculation, settling, and filtration methods. Treated storm water will be discharged to the Lauritzen Channel via the SW-5 outfall. Based on our discussion during the 5-Year Review Inspection, I believe that this work has already been done, right? If not, what is that status of this project and what is its target completion date? We completed the installation of the system as described above. We have results for two of four sampling events and are pleased with the results.

Please feel free to call me with questions.

Thank you in advance for your time,

Jamie
